

## Math 501 Homework (§4.3 Limits at Infinity)

**Problem 1.** Let  $f : \mathbb{R}^+ \rightarrow \mathbb{R}$ . Let  $f_n = f(n)$  for  $n = 1, 2, \dots$  a sequence corresponding to the function  $f$ . Which of the following statements are true?

1. If  $\lim_{x \rightarrow \infty} f(x) = L$ , then  $\lim(f_n) = L$ .
2. If  $\lim(f_n) = L$ , then  $\lim_{x \rightarrow \infty} f(x) = L$

**Solution.** 1. Let  $\lim_{x \rightarrow \infty} f(x) = L$ . By definition this implies that for every sequence  $(x_n)$  in a subset  $(a, \infty)$  of  $\mathbb{R}^+$ , such that  $(x_n) \rightarrow \infty$ ,  $(f(x_n)) \rightarrow L$ . We can use this property to pick  $(x_n) = \mathbb{N}$  which we know tends to  $\infty$ , hence  $(f(x_n)) \rightarrow L$ . **TRUE**.

2. Conversely, let  $(f(x_n)) \rightarrow L$ . Again by definition every convergent sequence  $f_n$  converges to the same limit as the function itself, hence  $f(x)$  must converge to  $L$ . **TRUE**
